DOUBLE

Mobile Milking Machine

Robust cluster support arm

Vacuum tank with removable side view lid

Animal Health Benefits

Machine milking has many benefits over hand milking. These include faster milking due to regular routines, and much better milk let down. Getting into a regular routine during lactation helps reduce stress in your animals. This will help to increase milk yield and improve your milk quality.

Better Milk Quality

The Daviesway i-Milk 2.0 single mobile milker is perfect for small herds where you are trying to improve milk quality. The milk is sealed from the teat to the bucket, so there is less chance of contamination from outside sources, reducing bacteria levels in your milk. The machine must be cleaned with the correct milking machine detergents after each use.

Includes everything you need for milking;

- Milking machine, heavy duty trolley frame & wheels• 2 x 30 litre stainless steel buckets
- 2 x clusters (Includes; 2 claws, 8 liners, 8 shells & 8 claw tubes)
- Clear milking tube
- Complete with brushware for cleaning & comprehensive instruction booklet
