

Tech-Line E-X1 Exit Gate Systems

The Tech-Line E-X1 Exit gate system includes a number of styles of controls to ensure your requirements are met. All have wide open areas for easy cow exit.

The Tech-Line E-X1 Pendulum Style exit gate simply improves on what generations of farmers have known – a simple robust system is essential for day to day operation.

Manual Operation

The gate can be controlled manually off a rail running down the length of the pit and equally spaced handles.

Pneumatic – Manual Valve

The same gate can also be controlled with a compressed air ram. Compressed air is a consistent and even source of control, and does not use plant vacuum that is critical to a quick, even and clean milking.

With this option of control there will be a manual valve for each side of the pit.

Pneumatic – Pull Cable

Using the same gate and system, this option is lifted by a simple flick of a cable that runs the length of the pit.
